## European Technical Assessment

## ETA 21/0603 of 27/06/2021

(English language translation, the original version in Czech language)

**Technical Assessment Body issuing the ETA:** Technical and Test Institute  
for Construction Prague

**Trade name of the construction product**

Injection system TEKNOBOND 401V  
TEKNOBOND 401V BLUE  
TEKNOBOND 401V TROPIC  
TEKNOBOND 401V FAST

**Product family to which the  
construction product belongs**

Product area code: 33  
Injection anchors for use in masonry

**Manufacturer**

Tekno Yapi Kimyasallari SAN. TIC. A.S.  
Deri OSB. Arıtma Cd. Gergef Sk. No:6  
Tuzla/ İstanbul, 34956  
TURKEY

**Manufacturing plant(s)**

Plant 1

**This European Technical Assessment  
contains**

56 pages including 53 Annexes which form  
an integral part of this assessment.

**This European Technical Assessment is  
issued in accordance with regulation  
(EU) No 305/2011, on the basis of**

EAD 330076-00-0604 Metal injection  
anchors for use in masonry

Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full (excepted the confidential Annex(es) referred to above). However, partial reproduction may be made, with the written consent of the issuing Technical Assessment Body - Technical and Test Institute for Construction Prague. Any partial reproduction has to be identified as such.

## 1. Technical description of the product

The Tekno Injection system TEKNOBOND 401V, TEKNOBOND 401V BLUE, TEKNOBOND 401V TROPIC and TEKNOBOND 401V FAST for masonry is bonded anchor consisting of a cartridge with injection mortar, a steel element and a plastic sleeve. The steel elements are the commercial threaded rods with hexagon nut and washer. The steel elements are made of galvanized or zinc plated steel, stainless or high corrosion resistance steel.

The anchor is placed into a drilled hole filled with injection mortar. The steel element is anchored via the bond between metal part, injection mortar and masonry.

The illustration and the description of the product are given in Annex A.

## 2. Specification of the intended use in accordance with the applicable EAD

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The provisions made in this European Technical Assessment are based on an assumed working life of the anchor of 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the products in relation to the expected economically reasonable working life of the works.

## 3. Performance of the product and references to the methods used for its assessment

### 3.1 Mechanical resistance and stability (BWR 1)

| Essential characteristic             | Performance     |
|--------------------------------------|-----------------|
| Characteristic values for resistance | Annex C6 to C40 |
| Displacements                        | Annex C5 to C39 |
| Durability                           | Annex B1        |

### 3.2 Safety in case of fire (BWR 2)

| Essential characteristic | Performance                                 |
|--------------------------|---|
| Reaction to fire         | Anchorage satisfy requirements for Class A1 |

### 3.3 Hygiene, health and environment (BWR 3)

No performance determined.

### 3.4 General aspects relating to fitness for use

Durability and serviceability are only ensured if the specifications of intended use according to Annex B 1 are taken into account.

## 4. Assessment and verification of constancy of performance (AVCP) system applied with reference to its legal base

According to the Decision 97/177/EC of the European Commission<sup>1</sup> the system of assessment verification of constancy of performance (see Annex V to Regulation (EU) No 305/2011) given in the following table applies.

| Product                              | Intended use   | Level or class | System |
|--------------------------------------|--|----------------|--------|
| Injection anchors for use in masonry | For fixing and/or supporting to masonry, structural elements (which contributes to the stability of the construction works) or heavy units | -              | 1      |

<sup>1</sup> Official Journal of the European Communities L 073 of 14.03.1997

**5. Technical details necessary for the implementation of the AVCP system, as provided in the applicable EAD**

The factory production control shall be in accordance with the control plan which is a part of the technical documentation of this European Technical Assessment. The control plan is laid down in the context of the factory production control system operated by the manufacturer and deposited at Technický a zkušební ústav stavební Praha, s.p.<sup>2</sup> The results of factory production control shall be recorded and evaluated in accordance with the provisions of the control plan.

Issued in Prague on 27.06.2021

By

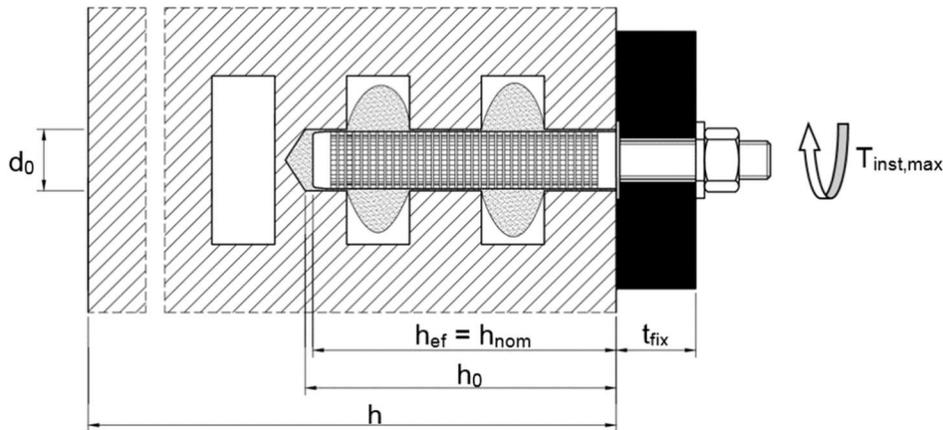

**Ing. Mária Schaan**

Head of the Technical Assessment Body

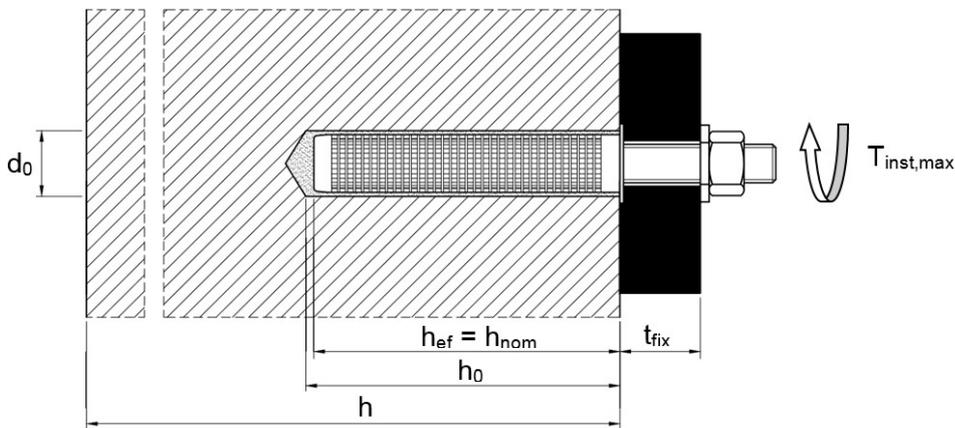

---

<sup>2</sup> The control plan is a confidential part of the documentation of the European Technical Assessment, but not published together with the ETA and only handed over to the approved body involved in the procedure of AVCP.

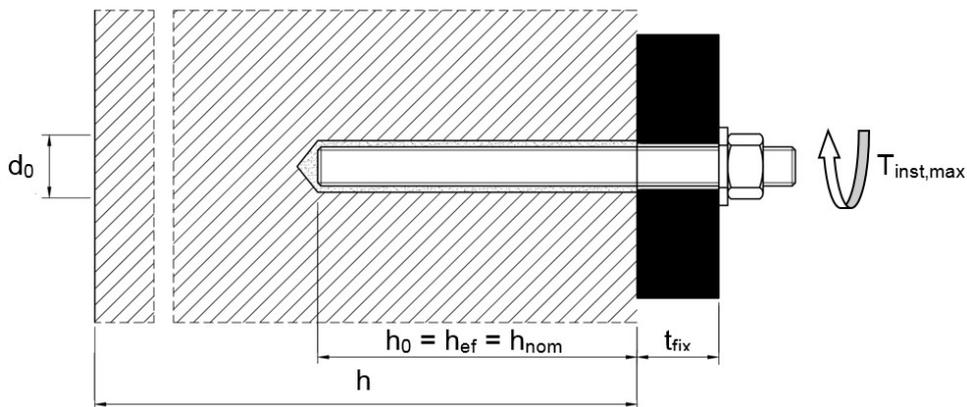

**Installation in hollow brick; threaded rod with sleeve**

**Installation in solid brick; threaded rod with sleeve**

**Installation in solid brick; threaded rod without sleeve**

$d_0$  = nominal drill hole diameter  
 $t_{fix}$  = thickness of fixture  
 $T_{inst,max}$  = max installation torque moment

$h$  = thickness of member  
 $h_0$  = depth of drill hole at shoulder  
 $h_{ef}$  = effective anchorage depth  
 $h_{nom}$  = overall embedment depth

## Specifications of intended use

### Anchorage subject to:

- Static and quasi-static loads

### Base materials

- Autoclaved Aerated Concrete (Masonry group d) to Annex B2.
- Solid brick masonry (Masonry group b), according to Annex B2 to B4.
- Hollow brick masonry (Masonry group c), according to Annex B2 to B4.
- Mortar strength class of the masonry M2,5 at minimum according to EN 998-2:2010.
- Joints of the masonry must be visible and filled with mortar.
- For other bricks in solid masonry and in hollow or perforated masonry, the characteristic resistance of the anchor may be determined by job site tests according to EOTA Technical Report TR 053 under consideration of the  $\beta$ -factor to Annex C1, Table C1.

Note: The characteristic resistances are also valid for larger brick sizes and larger compressive strength of the masonry unit.

### Temperature range:

- $T_a$ : -40°C to +40°C (max. short. term temperature +40°C and max. long term temperature +24°C)
- $T_b$ : -40°C to +80°C (max. short. term temperature +80°C and max. long term temperature +50°C)

### Use conditions (Environmental conditions)

- Dry and wet structures (regarding injection mortar).  
(X1) Structures subject to dry internal conditions (zinc coated steel, stainless steel A2 resp. A4 or high corrosion resistant steel).
- (X2) Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist (stainless steel A4 or high corrosion resistant steel).
- (X3) Structures subject to external atmospheric exposure and to permanently damp internal condition, if other particular aggressive conditions exist (high corrosion resistant steel).

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

### Use conditions in respect of installation and use:

- Category d/d: Installation and use in dry masonry
- Category w/w: Installation and use in wet masonry (incl. w/d installation in wet masonry and use in dry masonry)

### Design:

- Verifiable calculation notes and drawings are prepared taking account the relevant masonry in the region of the anchorage, the loads to be transmitted and their transmission to the supports of the structure. The position of the anchor is indicated on the design drawings.
- The anchorage are designed in accordance with the EOTA Technical Report TR 054, Design method A under the responsibility of an engineer experienced in anchorages and masonry work.

### Installation:

- Dry or wet structures
- Anchor Installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.

Working and curing time

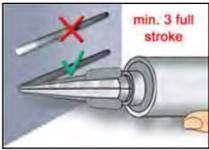

**Annex B 6**

## Installation instructions

### Preparation of cartridge

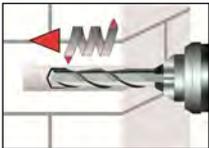

1. Remove the cap and attach the supplied static-mixing nozzle to the cartridge and load the cartridge into the correct dispensing tool. In case of a foil tube cartridge, cut off the clip before use. For every working interruption longer than the recommended working time (Table B4) as well as for new cartridges, a new static-mixer shall be used.

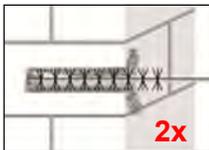

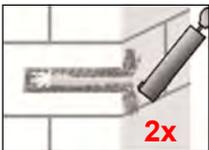

2. Prior to dispensing into the anchor hole, squeeze out separately a minimum of three full strokes, for foil tube cartridges six full strokes, and discard non-uniformly mixed adhesive components until the mortar shows a consistent grey or blue (TEKNOBOND 401V BLUE) colour.

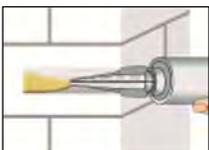

### Installation in solid masonry (without sleeve)

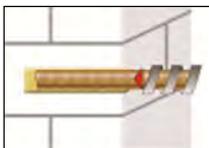

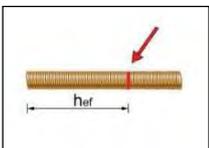

3. Holes to be drilled perpendicular to the surface of the base material by using a hard-metal tipped hammer drill bit. Drill a hole, with drill method according to Annex C4 – C39, into the base material, with nominal drill hole diameter and bore hole depth acc. to the size and embedment depth required by the selected anchor. In case of aborted drill hole the drill hole shall be filled with mortar.

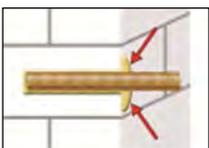

4. Blow out from the bottom of the drill hole two times. Attach the appropriate sized brush ( $> d_{b,min}$  Table B2 or B3) to a drilling machine or a battery screwdriver, brush the hole clean two times, and finally blow out the hole again two times.

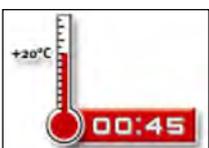

5. Starting from the bottom or back of the cleaned anchor hole fill the hole up to approximately two-thirds with adhesive. Slowly withdraw the static mixing nozzle as the hole fills to avoid creating air pockets. Observe the gel-/ working times given in Table B4.

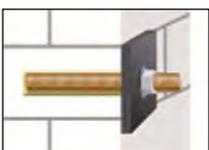

6. The position of the embedment depth shall be marked on the threaded rod. Push the threaded rod into the drill hole while turning slightly to ensure positive distribution of the adhesive until the embedment depth is reached. The anchor shall be free of dirt, grease, oil or other foreign material.

7. Be sure that the annular gap is fully filled with mortar. If no excess mortar is visible at the top of the hole, the application has to be renewed.

8. Allow the adhesive to cure to the specified time prior to applying any load or torque. Do not move or load the anchor until it is fully cured (attend Table B4).

9. After full curing, the fixture can be installed with up to the max. torque (see parameters of brick Annex C5 to Annex C39) by using a calibrated torque wrench.

**Tekno Injection system for masonry  
TEKNOBOND 401V, FAST, TROPIC, BLUE**

**Intended use**  
Installation instruction Solid masonry and Autoclaved Aerated Concrete

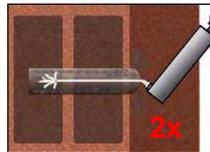

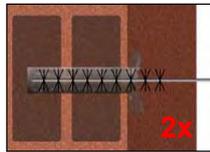

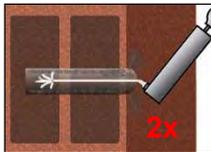

**Annex B 7**

## Installation instructions (continuation)

### Installation in solid and hollow masonry (with sleeve)

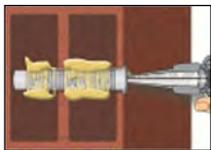

3. Holes to be drilled perpendicular to the surface of the base material by using a hard-metal tipped hammer drill bit. Drill a hole, with drill method according to Annex C4 – C39, into the base material, with nominal drill hole diameter and drill hole depth acc. to the size and embedment depth required by the selected anchor. In case of aborted drill hole the drill hole shall be filled with mortar.

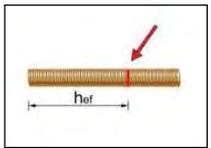

4. Blow out from the bottom of the drill hole two times. Attach the appropriate sized brush ( $> d_{b,min}$  Table B2 or B3) to a drilling machine or a battery screwdriver, brush the hole clean two times, and finally blow out the hole again two times.

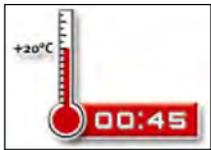

5. Insert the sleeve flush with the surface of the masonry. Only use sleeves that have the right length. Never cut the sleeve except the sleeve 16x130/330. For installing the sleeve 16x130/330 measure the required length of sleeve, cut the sleeve from the top and set the cap on it before pushing it through the fixing element.

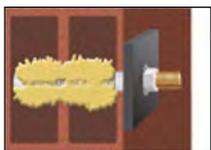

6. Starting from the bottom or back fill the sleeve with adhesive. For quantity of mortar attend cartridges label or installation instructions. Observe the gel-/ working times given in Table B4.

7. The position of the embedment depth shall be marked on the threaded rod. Push the threaded rod into the drill hole while turning slightly to ensure positive distribution of the adhesive until the embedment depth is reached. The anchor shall be free of dirt, grease, oil or other foreign material.

8. Allow the adhesive to cure to the specified curing time prior to applying any load or torque. Do not move or load the anchor until it is fully cured (attend Table B4).

9. After full curing, the fixture can be installed with up to the max. torque (see parameters of brick Annex C5 to Annex C39) by using a calibrated torque wrench.

## Spacing and edge distances

- $C_{cr}$  = Characteristic edge distance
- $C_{min}$  = Minimum edge distance
- $S_{cr}$  = Characteristic spacing
- $S_{min}$  = Minimum spacing
- $S_{cr II}$ ; ( $S_{min II}$ ) = Characteristic (minimum) spacing for anchors placed parallel to bed joint
- $S_{cr \perp}$ ; ( $S_{min \perp}$ ) = Characteristic (minimum) spacing for anchors placed perpendicular to bed joint

| Anchor position \ Load direction   | Tension load | Shear load parallel to free edge | Shear load perpendicular to free edge |
|--|--------------|----------------------------------|---------------------------------------|
| Anchors places parallel to bed joint $S_{cr,II}$ ; ( $S_{min,II}$ )            |              |                                  |                                       |
| Anchors places perpendicular to bed joint $S_{cr,\perp}$ ; ( $S_{min,\perp}$ ) |              |                                  |                                       |

- $\alpha_{g,N,II}$  = Group factor in case of tension load for anchors placed parallel to the bed joint
- $\alpha_{g,V,II}$  = Group factor in case of shear load for anchors placed parallel to the bed joint
- $\alpha_{g,N,\perp}$  = Group factor in case of tension load for anchors placed perpendicular to the bed joint
- $\alpha_{g,V,\perp}$  = Group factor in case of shear load for anchors placed perpendicular to the bed joint

Group of two anchors:  $N^{g_{Rk}} = \alpha_{g,N} * N_{Rk}$  and  $V^{g_{Rk}} = \alpha_{g,V} * V_{Rk}$   
 Group of four anchors:  $N^{g_{Rk}} = \alpha_{g,N,II} * \alpha_{g,N,\perp} * N_{Rk}$  and  $V^{g_{Rk}} = \alpha_{g,V,II} * \alpha_{g,V,\perp} * V_{Rk}$   
 ( $N_{Rk}$ :  $N_{Rk,b}$  or  $N_{Rk,b,j}$  for  $C_{cr}$ )  
 ( $V_{Rk}$ :  $V_{Rk,c}$ ;  $V_{Rk,c,j}$ ;  $V_{Rk,b}$  or  $V_{Rk,b,j}$  for  $C_{cr}$ )  
 (with the relevant  $\alpha_g$ )
